The SIEM Migration Factory

With the rise in demand for more cost-effective, adaptable SIEM solutions, NETbuilder has launched the SIEM Migration Factory to provide a seamless, efficient transition for businesses moving to alternative platforms.

The NETbuilder Solution

The SIEM Migration Factory was created in response to market shifts, providing an efficient, repeatable, and affordable solution to move to alternative platforms that better support modern security needs.

Our team has deep cross-platform expertise, **performing a high volume of migrations globally,** which lets us deliver faster and at scale—helping you free internal teams to focus on innovation and core tasks.

Streamlining Repetitive Tasks: Migrations often involve repetitive tasks that can consume valuable time and resources. Our specialized teams are equipped to handle these tasks efficiently, allowing for a faster transition compared to internal teams who may lack the experience. This reduces overall project timelines and minimizes disruptions to your operations.

Consolidated Cross-Platform Expertise: Our dedicated teams comprise multi-skilled experts who understand both the current (as-is) and future (to-be) systems. These expertise enable us to perform migrations with precision and confidence, ensuring a smooth transition. Our engineers get it right first time, adhering to best practices and minimizing future maintenance overhead.

Empowering Your Internal Teams: By managing the migration process, we allow your internal teams to focus on their core responsibilities rather than getting bogged down by the migration. This approach not only saves time but also gives your teams the opportunity to innovate and drive strategic initiatives during the transition.

Our SIEM migration service provides a complete team:

Engineering Team

✓ **Data Migration & Mapping:** Migrate and map data from Splunk to ensure completeness and compatibility and standardize data models to streamline the transition.

✓ **Rule & Correlation Migration:** Automate the transfer of security rules and test them in the new environment.

✓ **Platform Configuration & Tuning:** Configure settings based on best practices and tune the platform for optimal performance.

✓ **Automation & Quality Control:** Develop scripts and tools to standardize tasks, ensuring repeatable quality and thorough testing.

Senior Consultants

✓ **Pre-Migration Strategy:** Assess your current environment and develop a tailored migration strategy.

✓ **Project Management & Stakeholder Engagement:** Serve as the primary point of contact, managing timelines and ensuring transparent communication.

✓ **Customization & Optimization:** Customize the new SIEM environment based on your security goals and provide optimization guidance.

✓ **Knowledge Transfer & Training:** Deliver training to your teams and offer post-migration support for a smooth transition.

Why choose NETbuilder for SIEM migrations?

NETbuilder's SIEM Migration Factory combines expertise, efficiency, and flexibility. With a centralized engineering team for technical tasks and senior consultants for strategic direction, we ensure a smooth transition to your new SIEM platform.

Our structured yet adaptable approach delivers high-quality services at competitive prices, exceeding expectations and positioning customers for future success.
